HEADLINE ROUNDUP

Flights Grounded, Businesses Disrupted Worldwide Due to Outages

Summary and analysis by the AllSides news team

Supply Chain Cyber Risks Exceed Most Companies' Ability to Contain Them

Gartner

71% Report their supplier network contains more vendors than it did three years ago

59% Have experienced a data breach due to a vendor or partner

73% Say they have experienced significant disruption caused by a supplier

16% Report they effectively manage supply chain cyber risks

Source: [Gartner Third -Party Risk Management Research](#)

Vulnerabilities are the #3 Attack Vector and Fastest Growing

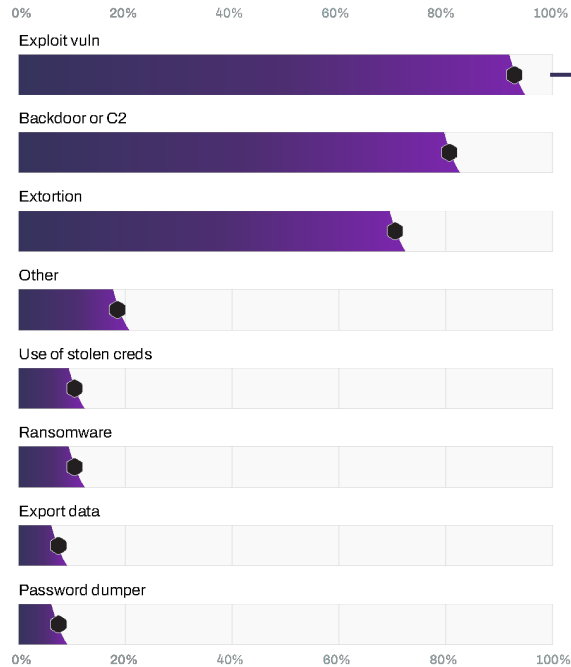

Last year we saw an 180% increase in the exploitation of vulnerabilities as the critical path action to initiate a breach

This includes the MOVEit vulnerability and other zero-day exploits that were leveraged by Ransomware and Extortion-related threat actors

Figure 6. Select ways-in Enumerations in non-Error, non-Misuse breaches over time

Vulns Dominate Supply Chain Attack Vectors

Supply chain breaches are driven by Exploit Vulnerabilities which ushers in Ransomware and Extortion attacks into organizations.

Knowing Your Supply Chain

The Foundation of Supply Chain Detection and Response (SCDR)

Knowing Your Supply Chain ...Not That Simple

Are they a critical vendor?

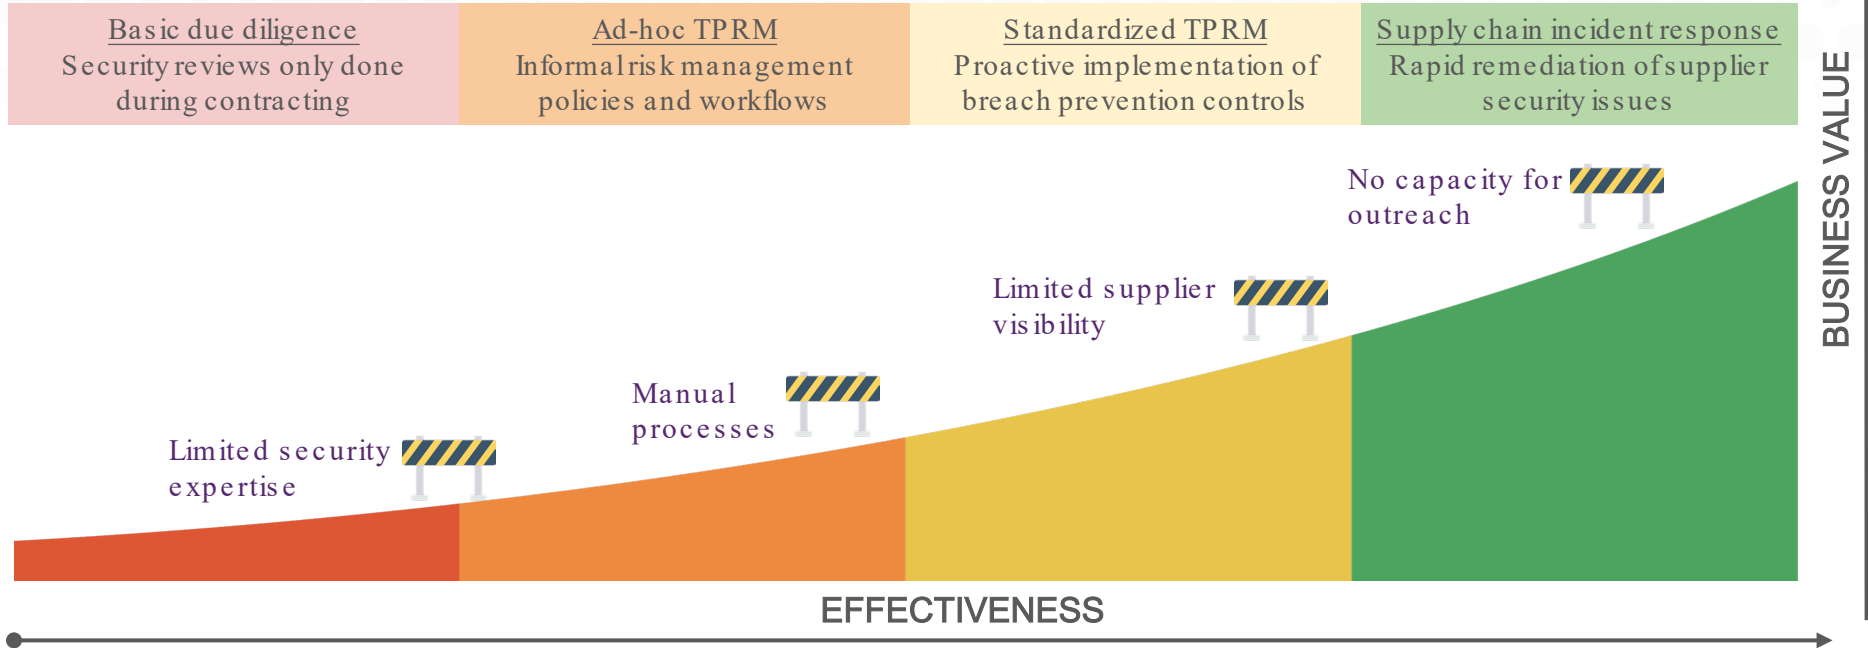

What's the impact?

Have I classified them?

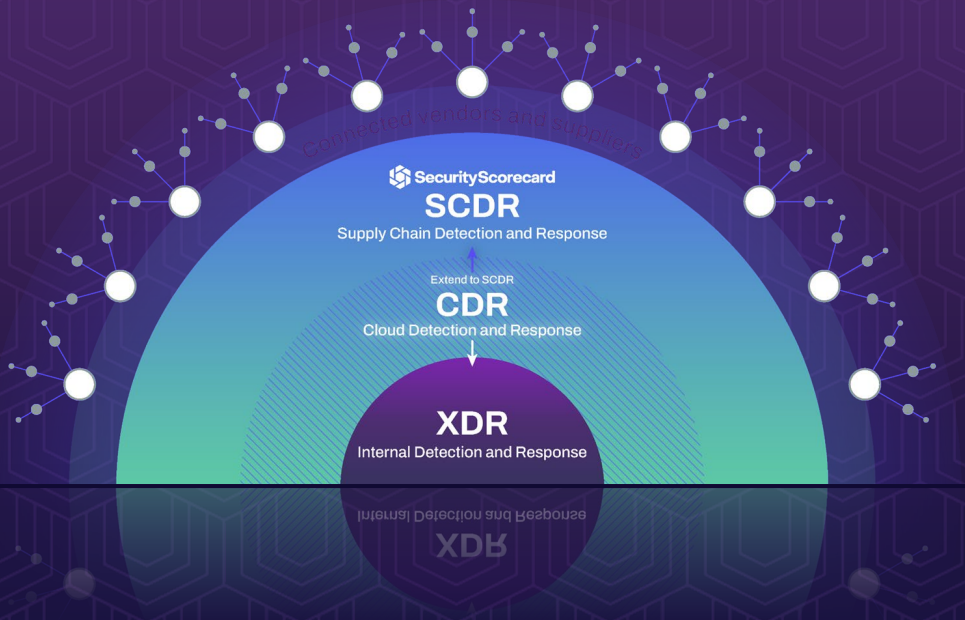

Many obstacles constrain supply chain cybersecurity maturity

Supply Chain Detection and Response

Extends XDR and CDR principles to identify and resolve supply chain issues

Supplier Visibility

Holistic and contextual view of **configuration risk**, **shadow IT** and **attack surface vulnerabilities**

Incident Response

Prioritize activation of **supply chain risk insights** through **SOC automation capabilities**

Supplier Remediation

Asset management capabilities and **issue resolution workflows** enable effective remediation

Strengthening Vendor Relationships & Accountability

Effective Strategies for Cyber Resiliency

Key Actionable Items Trends

1. Categorize and assess your vendors, especially to understand 'unknowns' and hidden risks.
1. Establish continuous monitoring across all critical vendors to stay informed on changes in risk.
1. Prepare incident response plans, including reviewing contracts, that include vendors as active participants.

Emerging

1. Predictive Threat Intelligence: Move beyond reactive strategies
1. Aligning TPRM to SOC: Leads to faster detection, more accurate risk prioritization, and a unified response to third-party threats.
1. Outsourcing Complex SCDR Programs: Enable your team to take on the complexity and providing expert insights and management.

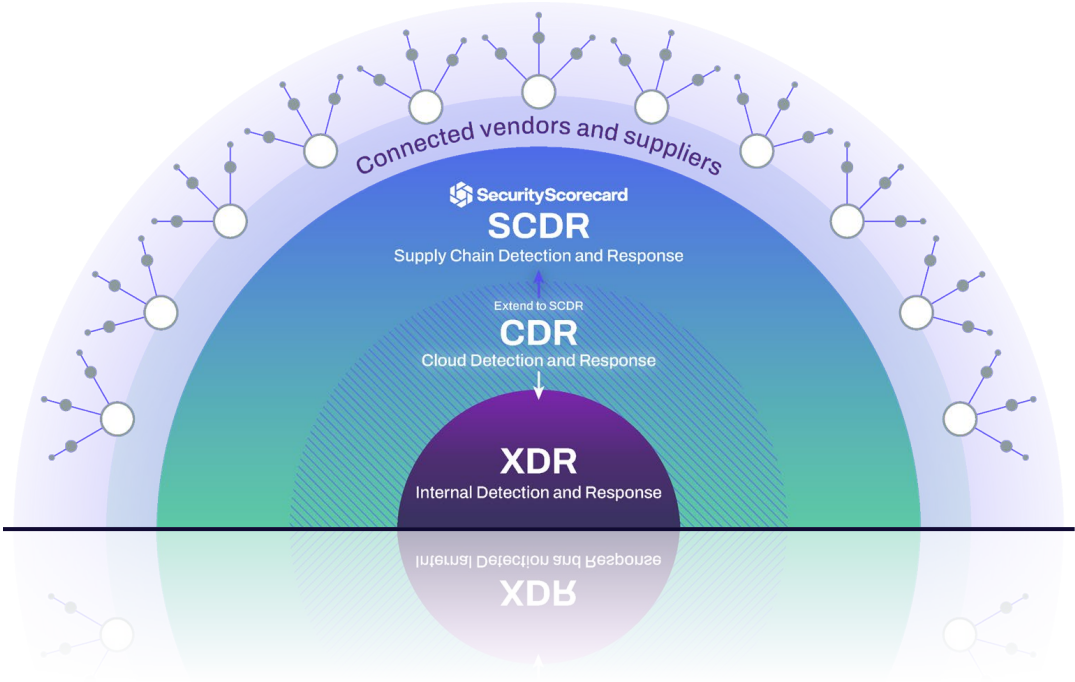

Continuous Improvement

SecurityScorecard's MAX

Supply Chain Detection and Response

MAX Outputs - Delivery Principles

**Advice &
Assistance**

**Hands -on
and full
context**

Transparency

Evolving from risk identification to issue resolution

Traditional TPRM (before)

- Single point in time risk assessments
- Focus is limited to prevention controls
- Issues are delegated to SOC
- Suppliers not aware of issues and impact

Supply Chain Incident Responders (now)

- Continuous risk and threat monitoring
- Response plans adapt to the incident
- Tight integration with SOC
- Suppliers are compelled to take action

Thank you!
